3.	INTRODUCTION OF 'POWERUSER' ROLE .....	<b>2</b>
4.	ADMINISTRATION SECTION WITH EASY TO USE UI .....	<b>2</b>
5.	BUG FIXES.....	<b>2</b>

## 1. About TruView Global 1.2.0

Following the release of TruView Global 1.0, we now have our first major update with important new features.

- Unlimited TVG size upload and import capability
- Introduction of 'poweruser' role
- Administration section with easy to use UI

## 2. Upload and Import of large .tvg files

In this version we improved support for large .tvg files removing the 4GB limit we had in version 1.0 and 1.0.1.

The users that are already running a previous version of TVG server will have to install on their virtual machine the 7zip utility now used by TruView Global to deal with large archives.

New VM images released with version 1.2 already contain the 7-zip utility pre-installed.

## 3. Introduction of 'poweruser' role

With this release we expanded the user management to be able to provide a new 'poweruser' role. The TVG users in this role have upload and publishing capabilities, but do not have user administration capabilities.

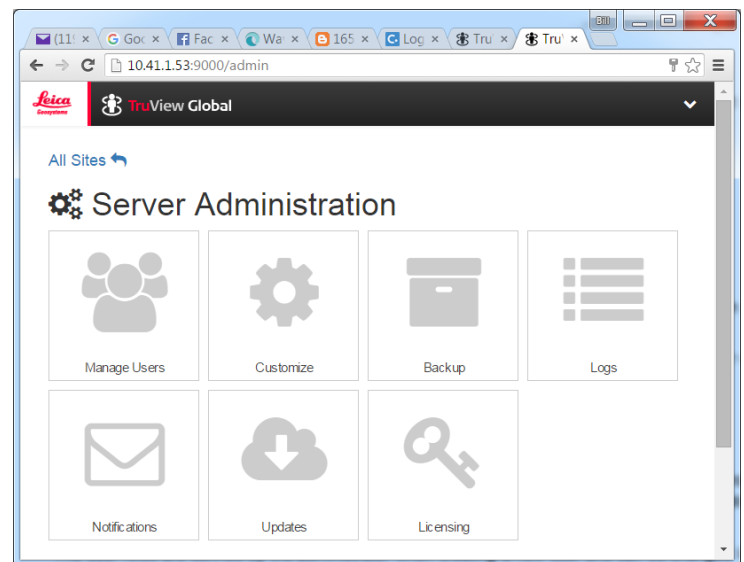

The user roles are defined by the administrator when creating a new user and can be changed later on.

## 4. Administration section with easy to use UI

A new Administration section has been added to the user interface to allow Administrator to manage all the settings and configuration available for the TruView Global server.

This new section allows to:

- Administer users: create, delete and modify users. Accept or reject new account and password resets.
- Customize the server: by setting customer information and customer logo for the site
- Backup and Restore data stored in the server
- Inspect Logs
- Set Email notifications and SMTP setting to allow the server to talk to a SMTP server
- Check for Updates and perform Update of the server with no downtime
- Set the license server and verify License information.

## 5. Bug fixes

We fixed several bugs including resolving issues with various browsers.
